The 2nd International Conference on Robotics and Intelligent System (ICRIS 2019) provides a very good opportunity for research scientists, investors, industrial and government representatives to present the latest innovations, novel results and the state-of-the-art ideas.

An intelligent system is a machine with an embedded, Internet-connected computer that has the capacity to gather and analyze data and communicate with other systems.

Other criteria for intelligent systems include the capacity to learn from experience, security, connectivity, the ability to adapt according to current data and the capacity for remote monitoring and management.

PROCEEDINGS

After a careful reviewing process, all accepted papers of ICRIS2019 after proper registration and presentation, will be published in the Conference Proceedings, which will be indexed by Ei Compendex and Scopus.
